Application/Control Number: 10/772,340 Page 2

Art Unit: 1723

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 22-23 and 43 are rejected under 35 U.S.C. 102(b) as being anticipated by English translated copy of WO 98/50091 (hereinafter referred to as WO translation). WO translation teaches a blood purification device comprising electronic control means (9-14) which based on measurements from pressure gauges 27-3'-4' and balances 5-6-7 to steer flows applied by pumps 1-4 including a pump (2) for replacement fluid i.e. infusion liquid wherein replacement fluid is brought by means of pump (2) from receptacle (15) with a flow divider regulating the proportion between the flow of replacement fluid injected into the blood circulation upstream from the filtration means (8) and the flow of replacement fluid injected into the blood circulation downstream from the filtration means (8) (see figure, page 11, 2<sup>nd</sup> and 4<sup>th</sup> paragraphs). WO translation further teaches pumps (2, 3) for circulating infusion liquid in pre dilution and post dilution pipes (see figure).
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 24, 31, 33 (independently), 35, 41 (independently), 42, 44, 45 (independently) and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO translation as applied to claim 22 in above paragraph 2, and further in view of U.S. Patent No. 5,762,805 (hereinafter

Application/Control Number: 10/772,340

Art Unit: 1723

4

referred to as Truitt et al). WO translation teaches the blood purification device as described in above paragraph 2. Claims 24, 31, 33 (independently), 35, 41 (independently), 42, 44, 45 (independently) and 46 essentially differ from the device of WO translation in reciting monitoring transmembrane pressure values and the actual permeability of a membrane of a filter. Truitt et al teach a dèvice for extracorporeal purification of blood comprising a blood filtration unit (40) comprising pressure sensors (51, 53, 54, 84) for measuring transfilter pressure or transmembrane pressure i.e. a parameter influenced by the resistance of the filtration unit (40) to the flow of liquid (see figures 1-2, col. 3, line 59 - col. 6, line 20), a computation unit comprising a control unit (102) connected to a monitor unit (104) for monitoring pressure sensors (51, 53, 54, 84) and for controlling a pump (66) for controlling the substitution solution to flow in a connecting conduit (70) (see figures 3a-3b, col. 6, line 43 - col. 11, line 40) wherein the control processor (122) in the control unit (102) receives signals from the monitor processor (140) in the monitor unit (104) and transmits signals to a motor controller (128) to halt a pump (66) whenever pressure sensors (51, 53, 54, 84) signal an abnormal pressure value from predetermined stored pressure value and allows operator to adjust the treatment steps to continue the treatment (see col. 17, line 31 - col. 18, line 27; col. 16, lines 10-40). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate pressure sensors of Truitt et al to measure transfilter pressure which indirectly measures the permeability of the filter in the device of WO translation to improve the control of infusion of liquid.

5. Claim 34 is rejected under 35 U.S.C. 103(a) as being unpatentable over WO translation in view of Truitt et al as applied to claim 33 in above paragraph 4, and further in view of WO 00/09182 (hereinafter referred to as WO '182). WO translation in view of Truitt et al teaches the

Application/Control Number: 10/772,340

Art Unit: 1723

blood purification device as described in above paragraph 4. Claim 34 essentially differs from the device of WO translation in view of Truitt et al in reciting a valve means for alternatively occluding the pre-dilution pipe and the post-dilution pipe. WO '182 teaches a blood purification device comprising valves (3, 4) for controlling the fluid to upstream and downstream of the filter (see abstract; figure 7). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate valves of WO '182 to control the flow of fluid into the pre dilution pipe and the post dilution pipe in the device of WO translation in view of Truitt et al.

- 6. Claims 25-30, 32, 36-40 and 47-49 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Kim whose telephone number is (571) 272-1142. The examiner can normally be reached on weekdays from 8:30 A.M. to 5:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda Walker, can be reached on (571) 272-1151. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications
may be obtained from either Private PAIR or Public PAIR. Status information for unpublished
applications is available through Private PAIR only. For more information about the PAIR
